Carcinogenic effects	: Not possible to classify because of insufficient data
Effects on the reproductive system	: Not possible to classify because of insufficient data
Specific target organ systemic toxicity(Single exposure)	: Causes stimulation to respiratory organs.(Category 3) Based on descriptions that respiratory tract irritation is seen by aerosol exposure in mouse, a rabbit, and agonies pig and that respiratory tract irritation is seen by short terms exposure, it was classified into category 3.
Specific target organ systemic toxicity(repeated exposure)	: May cause damage to organs(kidney) through prolonged ore repeated exposure(category 2) It is Witten that there were vacuolar degeneration of kidney tubular epithelial cells, and atrophic of kidney glomerulus. Since these symptoms were found within the scope of the guidance value of Category2, it was classified into category 2(kidney).

In the high concentration, acute effects like cough, shortness of breath, bloodstained sputum evacuation and continuing effects like decreased function of lungs, emphysema are recognized. In inhalation studies of guinea pig for eight hours, lung bleeding and dysfunction are recognized.

Specific target organ systemic toxicity(repeated exposure)

: Cause damage to organs (respiratory organs) through prolonged or repeated exposure. (category 1)

In inhalation studies of sulfuric acid of rats for 28 days, at the guidance concentration range of category 1, cell growth on pharyngeal mucosa is recognized. In repeated inhalation studies of guinea pig, in the same concentration, respiratory tract and lung disorder are recognized. In inhalation, studies of cynomolgus monkeys for 78 weeks, at the guidance concentration range of category 1, histological alteration like hyperplastic cell on bronchiole, thickened lung wall are recognized.
